

## Care & Information Sheet

# Cockatiels

Cockatiels originated in Australia, they are known for their calm nature and are very easy to care for. They mimic repetitive sounds and noises and bond easily with their human companions. They are members of the parrot family and the world's second most popular pet bird. The average size is 11 to 14 inches and with proper care and nutrition they can live up to 25 years. Bird owners should avoid non-stick cookware and appliances as they can release fumes hazardous to the bird's health.

### Habitat

- A cage approximately 24" W x 14" D x 24" H, with metal bars spaced no greater than ½" apart will make a good home for your cockatiel. It is best to provide the largest habitat possible, a flight cage is strongly recommended.
- Perches should be at least 5" long and ½" in diameter. A variety of perch sizes is recommended to exercise feet and help prevent arthritis.
- A metal grate over the tray will keep the bird away from droppings. Line the droppings tray with cage paper or appropriate substrate for easier cleaning. To avoid contamination, do not place food or water containers under perches.
- Birds acclimate well to the average household temperature. Avoid extreme temperature changes. The cage should be placed off the floor in an area that is well-lit and away from drafts.

### Food & Water

- Specialized pelleted diets are highly recommended and should consist of 60–70% of the diet. Use fortified seeds in moderation as they are higher in fat and less nutritious than pellets. If your bird is use to a seed diet, convert to pellets gradually. Replace food daily.
- Treats should not exceed 10% of total food intake. Avoid sugar and high fat treats.
- Fresh fruit and vegetables such as strawberries, apricots (no pits), bananas, dark green leafy vegetables (like spinach or kale), peas, carrot tops, celery, and corn.
- Do not feed birds fruit seeds, avocados, chocolate, caffeine or alcohol as these can cause serious medical conditions.
- Fruits & vegetables can be offered as a treat daily but should be discarded if not consumed within 24 hrs.
- Clean, fresh, filtered, chlorine-free water changed daily.

### Maintenance

- Clean and disinfect the cage and perches regularly. Replace substrate or cage liner weekly or more often if needed.
- Replace perches, dishes, and toys when worn or damaged. Rotate new toys into the habitat regularly,
- Ensure that there are no cage parts or toys with lead, zinc or lead and lead-based paints or galvanized parts as these can cause serious medical issues if ingested by your bird.

### Grooming and Hygiene

- Provide filtered, chlorine-free, lukewarm water regularly for bathing, and remove the water when done or as an alternative mist the bird with water or a grooming spray.
- Clipping flight feathers is not necessary, but when done correctly it can help prevent injury or escape.
- Nails should be trimmed by a qualified person to prevent injury to the bird.

### Supplies

Cage & Cage Cover	Pellets & Fortified Seed	Grooming Spray	Cuttlebone & Millet Spray
Cage Paper or Substrate	Food & Water Dishes	Bird Bath	Nail Clippers & Styptic Gel
Variety or Perches	Vitamin supplements	Variety of Toys	Book about Cockatiels

### Health

Because all birds are potential carriers of diseases, always wash your hands before and after handling your bird and/or the habitat contents to help prevent the potential spread of disease.

*You should consult with an avian veterinarian if you observe any of the following conditions.*

- Chlamydiosis - Appetite loss, fluffed feathers, nasal discharge.
- Conjunctivitis - Red, tearing, closed puffy eyes. Wash eyes with warm water.
- Diarrhea - Fecal portion of stool not formed. Multiple causes, from change in diet to internal parasites. Ensure correct diet and reduce fruit intake.
